Teledyne LeCroy Test Services Nuclear Quality Assurance Statement

Teledyne LeCroy Test Services (TLTS) maintains a Quality Assurance Program that is structured on the requirements of Title 10, *Code of Federal Regulations*, Part 50, Appendix B and ASME NQA-1-2008, Add. NQA-1a-2009 with 10 CFR Part 21 reporting responsibility. TLTS provides the nuclear industry with safety related SMARTSTEMs, strain gage sensors, Motor Operated Valve and Air Operated Valve testing and diagnostic equipment, engineering services, and safety related software.

TLTS classifies individual products, components, and/or services as commercial, safety related and or commercial grade based on the requirements. Our Quality Assurance program is invoked on products and services that are classified by TLTS as safety related. Verification and Validation process results may be used to classify products as safety related. If no Quality Assurance requirements, standards, codes, or regulations are noted on a customer's purchase order, these orders are processed as commercial items.

The program assures full compliance with the requirements of the nuclear power industry for both safety-related and commercial grade products. The current program revision is ***Quality Assurance Manual 4th Edition Rev. 2, dated August 22, 2022.***

A handwritten signature in black ink, appearing to read "Peter J. Miner".
